

JACKSONVILLE VETERINARY SURGERY & ORTHOPEDICS

NOCITA INFORMATION

We proudly use Nocita in all our TPLO and orthopedic procedures and offer it for all soft tissue procedures. We have used this drug off-label in thousands of patients with excellent results and minimal adverse reactions.

Nocita (bupivacaine liposome injectable suspension) is the only long-acting local anesthetic that provides up to 72 hours of postoperative pain control with one dose for cranial cruciate ligament (CCL) surgery in dogs and onychectomy in cats.

The extended duration of action assists in preventing analgesic gaps in the first 72 hours of post-surgery recovery, which helps to ensure pain control so that your pet remains comfortable even after going home.
